

## Crane Cams Roller Lifters For Holden V8 Engines

Crane Cams introduced the first custom designed Holden Roller Lifters over 30 years ago. Since that time the design has been improved and refined to offer today the finest Holden V8-specific roller lifters you can purchase, both in hydraulic and solid lifter designs.

All Crane roller lifters are designed not to unmask the oil gallery on full lift when used with Crane Cams. (A common fault with some other lifters)

### Hydraulic

The Hydraulic lifters (P/N **24533-16**) feature 8620 Chrome moly bodies (much stiffer than the cheaper cast bodies many use), heat-treated steel guide bars, High-RPM plunger design, premium axle and bearing assembly, and an oiling design specific to the Holden V8.

### Mechanical

Mechanical roller lifters are available in 2 designs – Original and Ultra-Pro. The original **24518-16** has been significantly upgraded, now featuring improved oil gallery coverage, pressure feed bearings, heat-treated steel guide bars with Monel rivets, taller guide bars to clear all blocks, and a high-quality .750" dia. wheel and bearing assembly.

### Ultra Pro

The Ultra-Pro version (P/N **24570-16**) features a stronger FEA designed 8620 chrome moly body, surface finished and features pressure-fed oiling, heat treated steel guide bars, Monel rivets, and a premium .750" dia. wheel and bearing assembly.
