

NEW PRODUCT

Crane Cams Ultra-Pro Roller Lifters for Chevrolet LS family of V-8s

The 2000 and later Chevrolet LS series of V-8 engines are rapidly gaining popularity in many performance venues. A reliable mechanical roller lifter is required for those high RPM, high valve spring pressure applications, so Crane Cams introduces our new Ultra-Pro roller lifters specifically designed for these powerplants.

Heat treated steel vertical locking bars are attached to the hardened and surface-finished one piece 8620 steel lifter bodies, by using our Monel pin and flange assemblies. Standard height pushrod seats are incorporated, so that normal length pushrods can be used. Pressurized oil is directed to the wheel assembly via internal passages, as is common on Crane roller lifters for over 35 years. Oil is also directed to the needle bearings and axles by the Crane Bearing Focused Oiling system, insuring oil flow at all RPM's.

Part Number	Application and Description
